Iran Geopolitical Risk & Global Oil Market Analysis

Monitoring Geopolitical Events, Oil Prices & Risk Trends

The dashboard highlights that nuclear sanctions were the most common category, while military events dominated geopolitical incidents, mainly in the Middle East with upward oil price shocks occurring most frequently. China remained Iran's largest oil export destination and generated the highest export revenue , although exports declined in 2020. Oil related and reimposed sanctions had the greatest GDP impact, the US exerted the highest cumulative sanctions pressure and geopolitical risk intensified in 2025 contributing to elevated Brent Oil price volatility.
